

PCSnapShot [Updated-2022]

PCSnapShot Crack + Activation Code [Mac/Win] (Latest)

KeyLogger program records all the keystrokes typed on the current input source and saves them to the disk. You can configure the program to capture only certain types of keystrokes (for example, only passwords, etc.) or capture everything. The application can be run at scheduled intervals, and every captured snapshot is stored on disk. KeyLogger can record each keystroke typed on the current input source without altering it. KeyLogger is able to record the passwords typed on web pages, and has the ability to capture the URLs typed in the address bar, which can be used to monitor your competitor's websites, and much more. The program can be configured to capture data only from specific websites or perform a global capture. If you're connected to the Internet, KeyLogger displays the webpage which was just typed. You can view the current website in the main window, or use the panel view, in which you can save snapshots to disk, or view the cache stored on the disk for later viewing. You can configure the program to capture the entire content or just specific elements of the web page. KeyLogger is a comprehensive password spyware tool which has a special module called "KeyLogger Strike" that allows users to secretly watch passwords being typed on any website of their choice. The program also captures data from FTP, Yahoo! Messenger, MSN Messenger, ICQ, AIM, Skype and any other IM programs. KeyLogger can also be used to listen to VoIP calls, monitor the SMS activity, monitor forum posts and messages, monitor e-mail traffic. The program can also capture all information the browser is browsing on the net (including passwords and your web site history). KeyLogger can record each keystroke typed on the current input source and saves them to the disk. You can configure the program to capture only certain types of keystrokes (for example, only passwords, etc.) or capture everything. The application can be run at scheduled intervals, and every captured snapshot is stored on disk. KeyLogger can capture each keystroke typed on the current input source without altering it. KeyLogger is able to record the passwords typed on web pages, and has the ability to capture the URLs typed in the address bar, which can be used to monitor your competitor's websites, and much more. The program can be configured to capture data only from specific websites or perform a global capture. If you're connected to the Internet, KeyLogger displays the webpage which was

PCSnapShot Crack+ License Key For PC (Latest)

PCSnapShot Crack +

PCSnapShot is a powerful keylogger utility that captures any alphanumeric keystrokes typed on your computer. Every typed keystroke can be recorded and saved automatically to a TXT log file. Screenshots from opened browsers can be saved, thus allowing you to see what a user is looking for while surfing the internet. PCSnapShot also captures full-screen images of webpages. With PCSnapShot you get to see the exact order in which users perform tasks on their computer, even if they are switching between programs. The program captures all keystrokes typed in an application, including commands within that application. PCSnapShot captures every alphanumeric keystroke, including those in password fields, thus enabling you to capture usernames and passwords. When used in conjunction with other spyware programs that capture passwords, PCSnapShot makes for one of the most powerful password capture utilities on the market. PCSnapShot comes with many features including Custom Screenshots, Advanced Thumbnail Display, an Interval Screen Snapshot option, Interval Keystroke Recording, Exclusion of Program Files and Exclusion of User Files, ability to hide from taskbar, and much more! Detailed explanations on how to use this application is available in the Help file. There is also a demo of PCSnapShot's functionality available in the Help file for you to try out. Other Systems WareShare - Free Ware for P2P file sharing WareShare is the first modern DHT style free p2p file sharing application, and is available for the many operating systems such as Linux, Windows, iPhone, Android, Blackberry, and other operating systems. WareShare will allow you to look up peers (also known as "hubs") by means of their IP address and/or domain name and will provide you with a list of available files on their computers. You can also browse your "hubs" (peers) computer files and even upload them to their computer. WareShare will also allow you to track the files you have uploaded and download as well, and will not allow your uploads to be limited by bandwidth or time. The website link to the WareShare program (is broken, but at the moment you can download a 32-bit version (which is free) of this program from this page (

What's New in the?

* Create and send secret file screen captures to PC users * Record activity on the screen, store hidden files and web history * Download webpages for viewing offline * Save and organize report files (Excel) * Email reports * Scheduled take screen snapshots at defined intervals * Now with... PCSnapShot is a keylogger that records activity on a computer including chats, instant messages, emails, the web sites visited, what is being searched for, activity on MySpace, the pictures and images posted and looked at, the keystrokes being typed, the programs started up and much more. And because of its advanced surveillance screen snapshot features, you get to see not only WHAT an end user is doing, but the EXACT order in which they do it, step by step. PCSnapShot is designed to capture both alphanumeric keystrokes and invisible characters. This means you can record all kinds of typed data including passwords - even passwords that appear as asterisks (*****) on the screen. All activity from within Internet Explorer can be monitored, and webpages are cached for viewing offline. You can schedule the software to take snap shots at defined intervals, thus capturing everything that is currently displayed on the screen. PCSnapShot Description: * Create and send secret file screen captures to PC users * Record activity on the screen, store hidden files and web history * Download webpages for viewing offline * Save and organize report files (Excel) * Email reports * Scheduled take screen snapshots at defined intervals * Now with... You are being watched. PCEye is a keylogger that will record everything you do on your computer, including passwords and all your private emails and instant messages. Not even your ISP can guarantee that they don't know what's going on. Due to new laws, it is now possible for any ISP to search all the information you send to your email server. They have to inform you that what you say on the phone, what you send by email and what you download. They also have to do this on demand. PCEye is a powerful keylogger that will record all the information. PCEye uses several methods to record your activity: Browser and email activity is stored into a hidden window. IM activity is recorded into a hidden window. Chats, Instant Messages and Emails are captured into a hidden window. You can choose the type of information that you want to record,
